- ### MICRONEEDLING • \$300
- ### MICRONEEDLING + PRP • \$600

What is microneedling and how is it performed?

Microneedling is a type of controlled, painless physical injury that is performed on the skin in order to trigger a healing and repair cascade. After numbing your skin with topical cream, we use a pen-like device that creates hundreds of tiny channels in the skin. This first step injures the skin in order to provoke a healing cascade. In order to help enhance the repair and rejuvenation of your skin, we inject and apply your own processed serum “PRP” to the skin.

What is PRP?

Platelet-Rich Plasma (PRP) therapy involves using your own blood serum, which has been enriched with your own platelets containing various growth factors, in order to remodel and repair skin damage. Growth factors in serum and platelets are the main agents that stimulate and repair the skin.

What can be improved using microneedling with PRP?

- Skin texture, color and tone consistencies
- Broken capillaries and large pores
- Scars, such as acne, burn or surgical scars
- Aging and skin discoloration resulting from sun damage
- Fine wrinkles and skin thinning
